

Description

- Current display and interaction technology is used to realize an intuitive digital working environment for the age of digitalization
- User and process requirements shape the digital working environment, instead of the other way around as was previously the case
- The increasing complexity and change of tasks in all areas of product development become more manageable

Work Change

- Overcoming the limitations of screen, keyboard and mouse with the Virtual Desktop One (VD1) user interface
- Users can map their mental model of the work process on the digital workspace
- Target group: Designers, planners and knowledge workers
