

## Description

- Intelligent machine components enable fast exchange, conversion and product change
- Interactive assistance systems support people in production in carrying out a wide variety of manual activities
- More efficient diagnostics through smart data and analysis

## Change in work

- People are supported in their decisions by intelligent assistance systems
- Work processes become more predictable and executable
- Less interference due to errors
- Communication is improved

## Added value & benefits

- Better predictability of machine behaviour reduces downtimes
- Workers can make more efficient decisions and take on different tasks
- Higher production flexibility through intelligent components
