

Description

- Simple and intuitive implementation, as well as reconfiguration of existing robot applications via drag&drop
- Any user (even without programming experience) can create, edit and execute his own robot program in a few minutes
- Easy to understand, graphical user interface for robot programming

Change in work

- Self-determined work organization of the worker with automation
- Work equipment can be individually adapted
- Workflows in planning are simplified by databases of existing skills

Added value & benefits

- Increased responsibility of the worker by taking over the implementation and interaction with the machine
- Independent implementation of new applications without purchasing external service providers (system integrators)
- Faster and easier troubleshooting and correction
