

Description

- Employee is actively assisted through complex assembly processes
- Employees can be quickly and intuitively trained in a wide variety of production environments
- Digital worker guidance reduces the complexity for the worker in handling process-relevant information
- Quality assurance during the process, through direct feedback on errors, such as incorrect gripping of material containers

Change in work

- Use of new, digital work and tools
- Personalization of the direct working environment
- Paperless worker guidance and preventive error control in the sense of Poka Yoke
- Active feedback for the employee in the work process

Added value & benefits

- Optimal provision of the required information for the employee to reduce information search times
- Proactive prevention of assembly errors leads to higher quality
- Employees can work more flexibly at different workstations
