

Description

- Simple if-then rules enable the networking of production plants and IT systems
- Graphical rule creation enables implementation even by employees without IT knowledge
- Employees can adapt their working environment to their needs in a self-organized manner
- Implementation of process optimizations can be carried out directly by the employee
- Fast implementation of simple use cases as an entry into Industrie 4.0

Change in work

- Employees in production take over simple automation tasks
- Process optimization by employees promotes the assumption of responsibility
- Adaptation by employees requires a certain level of digital literacy

Added value & benefits

- Individually configurable process improvements lead to
 - Increased employee satisfaction
 - Increased efficiency in the process
- Process innovations become transparent and can be rolled out company-wide
- Better understanding of digitisation and Industrie 4.0
